## Large Deformations in Soil

Many practical problems in soil mechanics involve large deformations that cannot be analyzed properly with existing analytical tools. Such problems include designing large flexible structures, predicting movements caused by induced excess pore pressures, interpreting data from cone penetration and other in situ test devices, and laboratory tests. Presently, these problems are analyzed using theories intended for small deformations or by empirical techniques, both of which are inadequate to develop comprehensive design and analysis criteria. Although development of large strain analysis is possible by the use of powerful computers, a better physical understanding of large deformations in soils is needed before improved computational tools can be developed and applied.

The Geotechnical Laboratory at the Waterways Experiment Station is developing a theory for large deformations of soil that could represent a fundamental advance in theoretical soil mechanics. Experiments to validate the theory will concentrate on defining the proper characterization of stress and strain when specimens are

subjected to large strains and rotations. Improved computer codes using cone penetration data will be used to analyze practical problems. Among the applications is the analysis of the dynamic response of dams to earthquake ground motions. Accurate prediction of earthquake-induced deformations is the key to making well-informed seismic safety and remediation decisions for embankment dams.

Point of contact for this technology is Dr. John F. Peters, telephone 601-634-2590.

### A Department of the Army Information Analysis Center

The SMIAC Bulletin is published and distributed periodically. Please contact the Director of SMIAC for more information:

Director, Soil Mechanics Information Analysis Center  
U.S. Army Engineer Waterways Experiment Station  
ATTN: CEWES-GV-Z  
3909 Halls Ferry Road  
Vicksburg, MS 39180-6199

Phone: (601) 634-3376  
FAX: (601) 634-3139

**PARTIAL LISTING OF EXPERTS  
GEOTECHNICAL LABORATORY  
U.S. ARMY ENGINEER WATERWAYS EXPERIMENT STATION**

<b>SPECIALTY</b>	<b>NAME</b>	<b>PHONE 601-634-</b>
Centrifuge Testing	Mr. Richard Ledbetter	3380
Dam Safety	Mr. Milton Myers	2640
Earthquake Engineering	Dr. Mary Ellen Hynes	2280
Foundations in Soil	Dr. Vic Torrey	2619
Foundations in Rock	Dr. Glenn Nicholson	3611
Geomorphology	Dr. Lawson Smith	2497
Geophysical Explorations	Mr. Joe Curro	2235
Groundwater Modeling	Dr. James May	3395
In Situ Testing	Dr. Richard Peterson	3737
Lab Testing	Mr. David Bennett	3974
Microtunneling	Mr. David Bennett	3974
Moisture Migration	Dr. Marian Rollings	2952
Numerical Modeling	Dr. John Peters	2590
Relief Wells	Mr. Roy Leach	2727
Seepage	Dr. Ed Perry	2670
Slope Stability	Mr. Earl Edris	3378
Swelling Soils	Dr. Richard Peterson	3737

## Effective Communications

Dr. I. Thomas Sheppard has often illustrated the importance of effective communications by reference to the famous Charge of the Light Brigade in 1854. When Lord Raglan, Commander-in-Chief of the British, French, and Turkish forces, awoke to find a long line of Russian guns, 3,500 Cossacks, and 30,000 infantry facing him, he directed that an effort be made to prevent the capture of some of his own threatened artillery. The resulting message, however, did not specify which guns the enemy was to be prevented from carrying away. The message was carried finally

to Lord Cardigan, Commander of the Light Brigade, who sought no clarification and interpreted the guns to be the 78 Russian cannons lined hub-to-hub across the valley. He led the suicidal charge that resulted in the loss of almost 500 of his 600 men.

Hopefully, we've never transmitted messages resulting in disasters of comparable magnitude. The Soil Mechanics Information Analysis Center aims to streamline the flow of reliable information. If you ever need clarification, please don't hesitate to call.

# Upcoming Event

XIVth International Conference on Soil Mechanics and Foundation Engineering, September 6-12, 1997, Hamburg, Germany. One page abstracts are requested. For more information, write or call:

CPO HANSER SERVICE  
PO Box 12 21
